# Diagnosis Result

Analysis complete

## Slipped Disc

Herniated nucleus pulposus

Probability

80%

## Spinal Tumor

Neoplasm detection

Probability

20%

### IMPORTANCE!

Based on MRI data and 0 reported symptoms, the AI predicts a high likelihood of slipped disc. The neural network detected disc herniation patterns in the lumbar region with characteristic signal changes. Clinical correlation with symptoms strongly supports this diagnosis.

# Medical Chatbot

I have severe back pain and numbness in my legs

Do you have muscle weakness and difficulty walking?

I do.

I have generated possible treatment recommendations for you. I can also refer you to a specialist if you like.
